

頭数

Figure 1 is a line graph illustrating the monthly distribution of precipitation (mm) for three different years: R7 (red solid line), 平年 (average year, black solid line), and R6 (dashed line). The x-axis represents months from April (4) to March (3), and the y-axis represents precipitation in mm from 0 to 10. R6 shows a significant peak in August, reaching nearly 8 mm, while R7 and the average year show much lower peaks around 2 mm in July.
