

Cooperative outlets for monitoring CO2

Operating a preventative measure for good ventilation!

Importance of good ventilation

Novel Coronavirus Expert Meeting (Ministry of Health, Labor and Welfare) has identified that "Closed spaces with poor ventilation can cause a high risk of outbreaks of cluster infections."

Prevention measures organized by Kyoto Prefecture

Visualisation of CO2 concentration levels using CO2 concentration measuring equipment and promotion of proper ventilation as an initiative for improving safety measures in restaurants and bars in Kyoto.

Cooperative outlets for monitoring CO2

Avoiding "poorly ventilated enclosed spaces", which is one of the risk factors for novel coronavirus infections.

The CO2 concentration in these outlets (facility) is monitored, and these outlets (facilities) are properly ventilated!
